

Environment Policy

Balfour Beatty Civil Engineering Limited respects the natural, built, social and economic environments on all projects in which it operates. When designing, planning, constructing or maintaining built infrastructure, our aim is to promote and contribute positively to sustainable development.

Balfour Beatty Civil Engineering Limited will seek to maximise the benefits that the built infrastructure brings to society. Insofar as our involvement allows, we will work closely with our customers, partners, designers, subcontractors and local stakeholders to assess environmental impacts and opportunities. We are committed to continual improvement through the adoption of innovative techniques and best practices that exceed customer expectations, meet societal needs and respect the environment.

As a steward for the industry we are committed to engaging with professional, regulatory and institutional organisations to help raise environmental standards.

When implementing projects in the UK or overseas, we are committed to ensuring that the company:

- Complies with all legal and Balfour Beatty Group requirements, which are regarded as a minimum standard in any operational location
- Prevents pollution and protects both the natural and the built environment
- Reduces the effects of noise, dust, disturbance and inconvenience arising from its activities
- Uses resources such as energy, water and raw materials efficiently
- Purchases goods and materials that are not scarce or known to cause significant environmental harm
- Minimises waste through re-use and recycling and safely disposes of any waste
- Responds promptly to any complaints or incidents and reports these in accordance with Balfour Beatty requirements

The company operates an Environmental Management System that fully satisfies the requirements of ISO 14001:2004 and ensures that throughout the business lifecycle environmental risks are identified, sound systems of work are adopted and best practice is shared. We will actively involve our employees and ensure that appropriate training is given to raising environmental awareness and establishing minimum site standards.

Environmental performance and progress against annually set objectives and targets is routinely monitored and reported through an Environmental Steering Group. The Board also reviews the effectiveness of this policy, our management arrangements and operational practices quarterly.

This policy will be brought to the attention of all employees and persons working on behalf of the company and reviewed at least annually. It will also be freely available to the public via the Company Internet Site.

A McNaughton
